Aim and Objective:

The "Medicinal Plants" Journal is covering all aspects of medicinal plants cultivation, agrotechnology, new drugs developments, pharmacognosy, ethnobotany and documentation, biotechnological improvements and micropropagation, pests and diseases, antimicrobiological and biological properties, marketing and commercialization of herbal products etc. The "Medicinal Plants" Journal is planned for publication of the most innovative, original and rigorous development in the basic and applied research on the medicinal plants. Inter-disciplinary studies of fundamental problems on the subject are given high priority. The structure of the journal takes into account the broad scope of R & D in Medicinal Plants research. Thus in addition to its full length and short papers on original research, the journal also includes regular features on editorial, review articles, meetings, scientific correspondence, new developments, current references on the subject from other sources and book reviews.

This journal is promoting interdisciplinary exchange of knowledge and ideas among the growers, researches, stakeholders and industry people. It is a unique journal covering all aspects of medicinal plants, their cultivation, isolation and identification of active

ingredients and herbal new formulations for different disease ailments. The published articles in the issues of Medicinal Plant journal are of high quality contributed by senior scientist and contributors from all over the world. Some of the published review papers are having maximum citations in other high impact journals. The Medicinal Plants serves as a high-profile vehicle for the publication of innovative and original research results. The printing of the journal is of high quality as per international standards.
